8 In this case the original applⁿ was finally disposed of by the rejection order communicated to applicants. It is different from the other case in which the applicants were directed to file an amended applⁿ So they have to be asked to file a fresh applⁿ with the prescribed fee of Rs 10/- In the present case, unless it is intended to view the orders already passed as not being a final disposal, and the present applⁿ as only an amended one. In this case no fresh fee should be called for, but leave granted to file the specification as revised. This course would be consistent with that adopted in the previous case, which is said to be almost identical, as the applicants explain.

(Secretary) 22.7.10

10 This has to be treated as a new application. We cannot now revise the order already passed. I suppose the rejection of an applⁿ does not bar a subsequent applⁿ of the same kind

17/8/10

11. I don't think so. Please verify & put up draft calling for fresh fee &c. 17/8/10

MYSORE.

THE SECRETARY TO THE GOVERNMENT OF ~~INDIA,~~
Genl. & Rev. Departments,
~~DEPARTMENT OF REVENUE AND AGRICULTURE (PATENTS)~~.
BANGALORE, Mysore.

From

REMFRY & SON,

Solicitors and Patent Agents,

CALCUTTA.

Dated Calcutta, 6th May 1910.

Sir,

re E.H.MARTIN. Mysore Case 2. "Preparation of ore for milling".

With reference to Official Letter dated 4th Sept 1909, herein, we have the honour to return this Application having amended the Claims. The Claims now filed have not only been accepted by the technical Committee of the Transvaal Chamber of Mines, but have been acted upon by the United States Patent Office.

In comparing the Office letter in this case with that in Case 1, we observe that whereas the latter indicates that leave will be granted upon amendment being made, the former is on the face of it a direct refusal. There is however, no reason for such differentiation and we presume that the present case will also be accepted provided the official objections are met.

The remarks in our letter of even date relating to Case 1, apply equally in this instance. It is conceded that the claims in both specifications were in fact drawn too broadly; but we would respectfully submit that this should only necessitate amendment. A consideration of the fresh Claims is therefore requested.

We have the honour to be,
Sir,
Your very obedient servants,

REMFRY & SON.

APPLICATION.

To the Dewan of Mysore.

The Application of ERNEST HOLROYD MARTIN, Battery Manager, of the Langlaagte Estate and Gold Mining Company Limited, Langlaagte, Johannesburg, Transvaal, for leave to file a Specification under Part I of the Mysore Inventions and Designs Regulation, 1894.

The applicant is in possession of an Invention for "Improvements in the preparation of ore and the like for milling"; he is the inventor thereof; and, to the best of his information and belief, the Invention is new within the meaning of Part I of the Inventions and Designs Act, 1894, and no circumstance exists which, if the Applicant is authorised to file a Specification and files it in accordance with that Part, will disentitle him to an Exclusive Privilege thereunder in respect of the Invention.

The following is a description of the Invention:-

SOLICITORS & PATENT AGENTS
REMFRY & SON
HALCUTTA

The present invention relates to the milling of ore and like substances in stamp batteries or other reducing machinery of the class which receives ore mainly as irregularly sized lumps and discharges it through a screen principally in the form generally designated as "sands".

According to this invention, after the ore has passed through all the prior steps that are necessary or desirable e. g., sorting, breaking and passing through the bins, so that no further comminution will occur, and immediately before it passes into the milling machinery, it is graded so as to remove from it all material which is equal to or less than the maximum size which the milling machinery is designed to produce.

In carrying out the invention in conjunction with a stamp battery, there is provided between the feeder and the mortar box a suitable device by which material "oversize" to the battery screening is passed on into the mortar box, whilst the "undersize" is separated and conveyed preferably to the plate in front of the battery.

Such a device is shown in the accompanying drawings, of which Fig. I is a detached view and Fig. II is a transverse section through it and through the mortar box to which it is fitted.

The device includes a box like structure 1 formed with an angular bottom 2 sloping towards one end 3. The top of the box is covered with an inclined grizzly 4 preferably of the improved construction shown. In such improved grizzly a number of comparatively

narrow bars 5 are situated horizontally and stepped down from one another; the vertical spacing between the bars being somewhat greater than the horizontal spacing. This formation obviates obstruction of the grizzly, since any lumps which are only slightly larger than the horizontal spacing of the bars and would therefore tend to lodge in said spaces were the grizzly surface plane, are afforded an opportunity to pass by falling backwards through the somewhat larger vertical spaces. The grizzly bars may be held in place on top of the box by means of a frame 6 bolted to the box.

Below the grizzly is placed an inclined screen 7, the mesh of which is equal to that of the battery screening 8. Said screen is mounted upon a frame 9 and is passed into place through a slot 10 in the side of the box 1 so that it may be removed when required for repairs or otherwise. The upper edge 11 of the frame 9 is bevelled in order to carry the wire fabric as closely as possible to the back of the box. Material passed off the screen is carried by a lip 12 clear of the box. A door 13 is provided in the side of the box to permit the screen to be swept and inspected from time to time.

14 represents a perforated pipe from which a water spray is delivered over the grizzly to assist separation and conveyance of the material. 15 indicates a pipe by which pulp collected in the pointed bottom 2 is conveyed around the mortar box 16 and distributed onto the amalgam plate 17 or otherwise disposed of as may be thought desirable.

Immediately beneath the grizzly is arranged a cut-off device consisting of the two pivoted leaves 18 and 19 which are provided externally of the box with actuating levers 20 and 21 respectively. Lever 21 is cranked at 22 to form a handle; said handle being adapted when swung up to engage lever 20 and so cause both levers to be closed simultaneously. 23 represents a catch which engages lever 21 to hold the leaves in the closed position. When hanging normally as shown in Fig. II leaf 18 shields the upper edge of the frame against falling ore, whilst leaf 19 directs ore which falls onto it to the upper part of screen 7. The handle 21 may be provided with an extension 24 which prevents withdrawal of the screen 7 whilst the leaves 18 and 19 are open.

In fitting up the above described device it is attached to the mortar box 16 so that the lip 25 at the lower edge of the grizzly overhangs the usual feed opening 26, whilst a special aperture 27 is cut to receive material from the screen 7.

In operation all material fed from the feeder 28 falls onto the grizzly, from which the larger lumps roll directly into the mortar box feed opening 26. Such material as passes through the grizzly is received by the screen 7, which passes material oversize to the battery screen into the mortar box through aperture 27 but permits the undersize to continue through into the pointed bottom whence it is conveyed by the stream of water, supplied by pipe 14, through the pipe 15 and so distributed onto the amalgamating plate 17 or otherwise disposed of as may be desired.

When it is required to repair or inspect the screen 7 the leaves 18 and 19 are turned up into place under the grizzly, whereby all the ore is passed directly into the mill without separation.

HAVING now particularly described and ascertained the nature of my said invention and in what manner the same is to be performed, I declare that what I claim is:-

1.---- In combination with a stamp battery having a motar box provided with discharge screening, an ore feeder, and a separating device external of the mortar box comprising inclined screening over which ore passes by gravity from the feeder to the mortar box, said screening separating material undersize to the battery screening and diverting the same from the battery.

2.---- In combination with a stamp battery having a mortar box provided with discharge screening, a casing having in its open upper end an inclined grizzly onto which the ore is fed and from which the material oversize to the grizzly falls by gravity to the mortar box, and adapted to receive matter passing through the grizzly the material oversize to the screen falling thence by gravity to the mortar box, said casing being provided with a closed-in bottom wherein material which passes through the screen is collected, and discharge means through which such material is withdrawn.

3.---- Apparatus as specified in the preceding claims, provided with means for playing water onto the ore to wash the undersize therefrom and to form it into a pulp, and a pipe for conveying such pulp away for further treatment.

4.----

The applicant therefore applies for leave to file a Specification of the Invention pursuant to Part I of the Inventions and Designs Regulation, 1894.

J.W. Martin .....

I, the Applicant above named, do declare that the facts stated in this Application are true to my knowledge, except as to matters stated on information and belief and as to those matters I believe them to be true.

Dated this day of June, 1909.

J.W. Martin .....

BANGALORE, Mysore.

From

REMFRY & SON,

Solicitors and Patent Agents,

CALCUTTA.

Dated Calcutta, 1st Sept 10.

Sir,

re E.H.MARTIN. Mysore.

With reference to Official Letter No. G.1338/GM 12-09-13 dated 27th August, intimating that the present Application has to be considered as a new one and that leave to file specifications as now amended will be granted on payment of a fee of Rs10/- and on a fresh Power of Attorney being filed, we would respectfully point out that the amendments made in the Application were made at the request of your Office, and are of a restricting character, and that the scope of the invention is in fact curtailed. Had it been otherwise, and had fresh subject-matter been added, it would have been in accordance with the practice of the British and other Patent Offices to require the Application to be post-dated to the date on which such added matter was included, but the original filing fee and Power of Attorney would have held good. In the present case, however, no fresh subject-matter has been included and we therefore most respectfully request that the Application as amended be granted with the original filing date (2nd July 1909) as was done in Case 1 filed in the same name on 1st July 1909.

We have the honour to be,

Sir,

REMFRY & SON.

Your very obedient servants,

ed 5/10

Certified that the fees prescribed in the fourth schedule to the Mysore Inventions and Designs Regulation, 1894, in respect of the application for leave to file the said specification and of the filing thereof have been paid by the applicant, and that the specification hereinbefore described has been duly filed in accordance with the provisions of Section 8 of the said Regulation on this the 25th day of March 1911.

Secretary to the Govt. of Mysore, Gen. and Rev. Depts.

(Section 8 of the Inventions and Designs Regulation, 1894.)

8. (1) If within six months from the date of an order under Section 6, Sub-Section (1), or within such further time, not exceeding three months, as the Government of Mysore, in its discretion, may, on cause shown to its satisfaction and on payment of the fee prescribed in that behalf in the fourth schedule, see fit to allow, the applicant causes a specification of his invention to be filed in manner by this Part required, and the fee prescribed in the fourth schedule in respect of the filing of the specification to be paid, the applicant shall, subject to the other provisions of this Part, be entitled to the exclusive privilege of making, selling and using the invention in the Territories of Mysore, and of authorizing others so to do, for a term of fourteen years from the date of the filing of the specification.

(2) But an exclusive privilege in respect of an invention of a new manufacture shall, notwithstanding anything in Sub-Section (1), cease, if the inventor fails to pay, within the time limited in that behalf by the fourth schedule, any fee prescribed in that schedule in respect of the continuance of the privilege.

(3) If, nevertheless, in any case, by accident, mistake, or inadvertence, an inventor fails to pay any such fee within the time so limited, he may apply to the Government of Mysore for an enlargement of the time for making the payment.

(4) Thereupon the Government of Mysore may enlarge the time accordingly, on payment of the fee prescribed in that behalf in the fourth schedule, and subject to the following conditions, namely :—

(*a*) the time for making a payment shall not in any case be enlarged for more than three months ; and

(*b*) if any suit is instituted in respect of an infringement of the exclusive privilege committed after a failure to make a payment within the time limited for the making thereof and before the enlargement of that time, the Court disposing of the suit may, if it thinks fit, refuse to award or give any damages in respect of the infringement.
